Where

Object Information

Object	Type	Details
M41	Open star cluster	Unaided eye visibility; ~2300 light years distant; smallish, faint haze with some stars sprinkled through it
M42	Diffuse nebula where stars are forming	Unaided eye visibility; ~1400 light years distant; small haziness; easy
The Pleiades	Open star cluster	Unaided eye visibility; ~440 light years distant; couple dozen stars; perhaps the best binocular object!
The Hyades	Open star cluster & bright star Aldebaran	Seen with unaided eye; distance ~150 light years (farther than Aldebaran)
